

busy time determination means for gathering the profiles for the one or more requested invitees and determining whether each of the invitees is available during the time interval requested by the request generating means; and

graphical user interface means associated with the request generating means for displaying results from the busy time determination means, the graphical user interface means permitting a user to select from at least [three] four different results viewing options including: a viewing option displaying those invitees that are available, a viewing option displaying those invitees that are not available, [and] a viewing option displaying those invitees whose schedule could not be found, and a viewing option displaying all invitees, and then displaying the results according to the viewing option selected.

4. (Twice Amended) A system for scheduling time intervals for a plurality of users comprising:

one or more databases which store a profile for each potential invitee of the system, the invitee profiles comprising user profiles, wherein each user profile comprises information regarding available and unavailable times for that user, the databases being located at one or more servers;

one or more user client systems connected over a network to the one or more servers operating a calendaring system which enables a user to request allocation of a time interval for one or more of the plurality of invitees;

wherein the calendaring system gathers the profiles for each of the one or more requested invitees and determines whether each of the invitees is available during the requested time interval; and

wherein the calendaring system permits the user to select from at least [three] four different results viewing options including: a viewing option displaying those invitees that are available, a viewing option displaying those invitees that are not available, [and] a viewing option displaying those invitees whose schedule could not be found, and a viewing option displaying all invitees, and then displays the results according to the viewing option selected.

5. (Twice Amended) A process for scheduling time intervals for a plurality of users comprising:

storing a profile for each potential invitee of the system, the invitee profiles comprising user profiles wherein each user profile comprises information regarding available and unavailable times for that user;

receiving a request for allocation of a time interval for one or more of the plurality of invitees;

gathering the profiles for the one or more requested invitees;

determining whether those invitees are available during the requested time interval; and

displaying results by permitting a user to select from at least [three] four different results viewing options including: a viewing option displaying those invitees that are available, a viewing option displaying those invitees that are not available, [and] a viewing option displaying those invitees whose schedule could not be found, and a viewing option displaying all invitees, and then displaying the results according to the option selected.

6. (Twice Amended) A processor usable medium having processor readable code embodied therein for enabling group calendaring between a plurality of users on a system, the system comprising one or more databases, associated with one or more servers, which stores a profile for each potential invitee of the system, the invitee profiles comprising user profiles, wherein each user profile comprises information regarding available and unavailable times for that user, the processor readable code in said processor usable medium comprising:

processor readable code for causing a server to receive a request for allocation of a time interval for one or more of the plurality of invitees;

processor readable code for causing a server to gather the profiles for the one or more requested invitees;

processor readable code for causing a processor to determine whether those invitees are available during the requested time interval; and
